

Ideation Phase

Brainstorm & Idea Prioritization Template

Date:	03 October 2026
Team ID:	SWTID-2026-3257
Project Name:	Implement Client Script & UI Policy (Incident Table)
Maximum Marks:	4 Marks

Brainstorming provides a free and open environment that encourages team members to participate in the creative thinking process. Prioritizing volume over value, innovative ideas are generated, grouped into themes, and prioritized based on Feasibility and Impact/Importance.

Step-1: Team Gathering, Collaboration & Problem Statement Selection

How Might We (HMW) Statement: "How might we dynamically control form field behaviors (visibility, mandatory requirements, and read-only states) on the Incident form using UI Policies and Client Scripts so that Service Desk Analysts can log and resolve tickets faster with zero data errors?"

Step-2: Brainstorm, Idea Listing and Grouping

Idea ID	Idea Description	Category / Group	Proposed Technical Approach
Idea 1	Dynamically reveal 'Resolution Code' and 'Resolution Notes' only when ticket state becomes 'Resolved'.	Dynamic Form Visibility	UI Policy on Incident table with condition [State is Resolved]. Set Visible = True for resolution fields.
Idea 2	Enforce 'Work Notes' and 'Assignment Group' as mandatory when Priority is Critical (P1) or High (P2).	Mandatory Field Rules	UI Policy with condition [Priority IS ONE OF P1, P2]. Set Mandatory = True for Work Notes.
Idea 3	Lock all fields to Read-Only automatically once the Incident ticket reaches 'Closed' state.	Data Integrity & Governance	UI Policy with condition [State is Closed]. Set Read-Only = True for all editable core fields.
Idea 4	Auto-calculate Incident Priority dynamically on the client side when Impact or Urgency dropdown changes.	Real-time Client Scripts	onChange Client Script on 'Impact' and 'Urgency' fields using g_form.setValue() without server roundtrip.
Idea 5	Populate dynamic alert and confirm prompts when changing Category to 'Hardware' or 'Network'.	User Guidance & Validation	onChange Client Script prompting analyst with recommended diagnostic steps before ticket assignment.

Idea 6	Clear resolution notes automatically if state is reverted back from 'Resolved' to 'In Progress'.	State Reset Handling	UI Policy Action / Client Script resetting 'Resolution Notes' value upon state change.
---------------	--	----------------------	--

Step-3: Idea Prioritization (Feasibility vs Importance Matrix)

To evaluate which ideas should be implemented first, each brain-stormed concept is plotted on a Prioritization Matrix comparing Feasibility (ease of implementation, low complexity, zero performance overhead) against Importance (business value, compliance, time saved).

Idea ID	Idea Title	Importance (Impact)	Feasibility (Ease)	Priority Quadrant / Action
Idea 1	State-based Resolution Field Visibility	High	High	Quick Win (High Prio)
Idea 2	Critical Priority Mandatory Rules	High	High	Quick Win (High Prio)
Idea 3	Closed State Read-Only Protection	High	High	Quick Win (High Prio)
Idea 4	Real-Time Priority Auto-Calculation	Medium	High	Quick Win (Medium Prio)
Idea 5	Interactive Category Guidance Prompts	Medium	Medium	Major Project / Secondary
Idea 6	State Reversion Field Cleansing	Low	High	Fill-in Task / Optional

Summary of Final Selected Implementation Scope

Based on the prioritization matrix, Ideas 1, 2, 3, and 4 fall into the 'High Importance & High Feasibility' quadrant (Quick Wins). These form the core implementation scope for Milestone 1:

1. UI Policy 1: Make Resolution Code and Resolution Notes visible and mandatory only when State = Resolved.
2. UI Policy 2: Make Assignment Group and Work Notes mandatory when Priority = 1 - Critical or 2 - High.
3. UI Policy 3: Make all core Incident fields Read-Only when State = Closed.
4. Client Script 1: Implement onChange Client Scripts for real-time validation and dynamic field updates.
